cabolo[®] one

The fully offline automatic minute-taking solution for recording, transcribing, translating, synchronising, indexing, and archiving audio-video in real-time with utmost security.

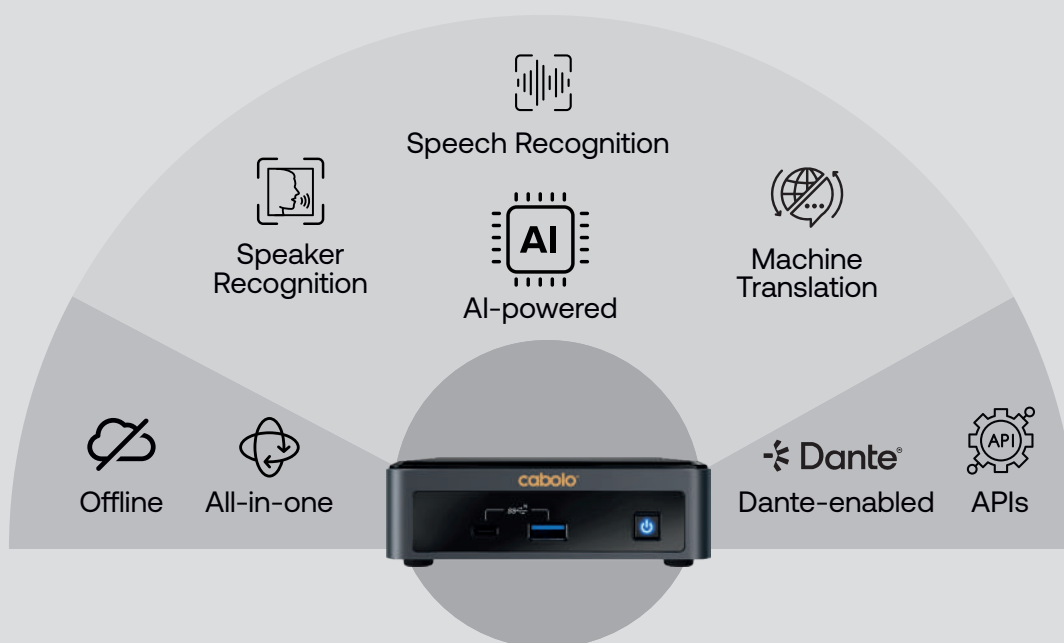

CABOLO[®] One is a device equipped with Artificial Intelligence, ideal support for meetings, board meetings, HR interviews, consultations, and training sessions where note-taking, report drafting, data privacy, portability, and archiving are essential.

CABOLO[®] One helps address the challenges that businesses face in the modern evolution of work:

- **Data Security:** Ensures the privacy and accurate documentation of internal meetings without compromising confidentiality.
- **Efficiency:** Automates note-taking, freeing up participants' time to focus on key aspects of their work.
- **Ease of Use:** Provides indexed transcriptions synchronised with audio for effortless review.

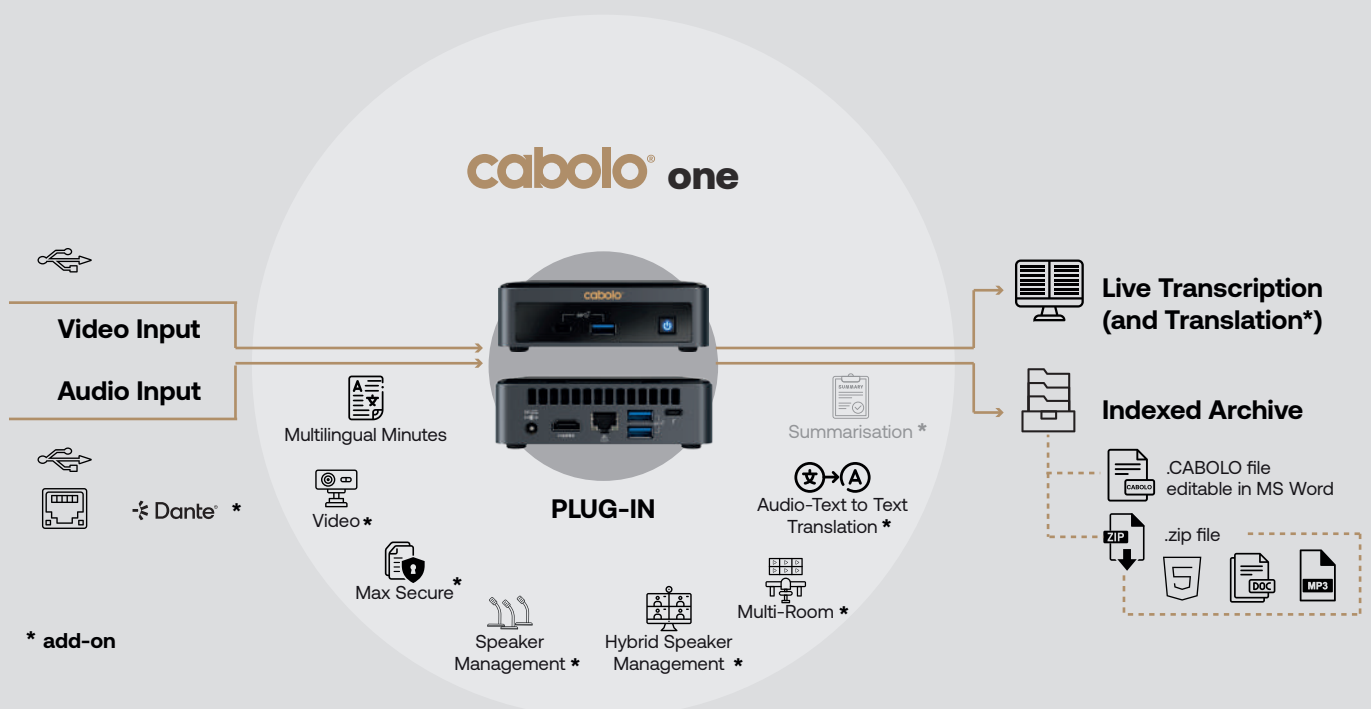

Characteristics of CABOLO[®] One:

- **Offline:** Operates without any internet connection, ensuring maximum data security.
- **Multilingual:** Leveraging advanced artificial intelligence, provides subtitling in over 40 languages and supports automatic translation in more than 60, making the content accessible to a global audience.
- **Speaker Recognition:** Accurately identifies individual speakers through each microphone within the conference system.
- **Extensive Compatibility:** compatible with leading professional audio-video systems, including Dante integration.
- **Customisable:** Offers configurable features to suit specific needs and utilises available REST APIs for further integration.

Features

- **Input:**
 - Network port (1)
 - USB port (5)
- **Output:**
 - Live
 - Indexed file archive
- **Advanced Search:** Every word is tagged, enabling the search, review, and playback of any information within the entire local archive (filterable by word, tag, date, language, and numerous other criteria).
- **File Upload:** For transcription and translation, supporting both single and multiple file uploads.
- **Plug-ins:**
 - Video Management.
 - Multilingual Minutes: Automatically generates draft reports in various formats; MS Word for translations, HTML5 multimedia file, and .CABOLO format compatible with dedicated CABOLO® Syncrodoc software for seamless content review. Creates a draft report which includes:
 - Transcription
 - Speaker references
 - Annotations
 - Agenda
 - Voting details
- Max Secure: Ensures secure storage on a dongle, watermarking, and timestamping of every frame, along with a qualified electronic seal and encrypted file fingerprint (HASH) compliant with the European eIDAS/eIDAS2 regulations.
- Speaker Management: Enables speaker assignment for conference systems with separate audio channels on CABOLO.
- Hybrid Speaker Management: Facilitates accurate identification of speakers in hybrid conferences using CABOLO® Gateway.
- Audio-Text to Text Translation: Converts the content of an audio file (or text) from the source language into written text in the target language while preserving the original document formatting.
- Multi-Room Functionality: Allows the same device to manage multiple rooms simultaneously, each configured independently, ensuring centralised management of associated data flows.
- Summarisation: Automatically generates summaries of transcriptions for quick review.

Effortless Transcription Editing Suite

cabolo® Syncrodoc

CABOLO® Syncrodoc is a cutting-edge, patented plug-in developed to streamline the review process of automatic texts produced by CABOLO®, directly within the MS Word environment.

This advanced tool offers synchronised audio and text functionality, enabling quicker and more intuitive text review, all seamlessly integrated into the familiar text editing interface

Key functionalities include:

- **Effortless correction and editing:** Syncrodoc provides an intuitive platform to review and edit transcriptions with access to associated audio-visual recordings.
- **Multi-level proofreading:** The plugin supports multiple stages of revision, ensuring rigorous quality control. Users can verify the accuracy of each word by simply clicking on it and listening to the corresponding audio segment.
- **Automatic audio-text synchronisation:** Syncrodoc maintains perfect synchronisation between text and audio throughout the editing process. This feature streamlines report generation, enabling faster finalisation after a meeting's conclusion.
- **Advanced 'point-and-click' functionality:** Syncrodoc uses timestamps to link each word in the transcription to its precise position in the audio-visual recording. This allows immediate access to any spoken word, enabling accurate and efficient editing.
- **Multi-format file export** of reviewed files in DOCX, SRT, and XML.

Time & Cost saving

Compliant with European Regulation eIDAS/eIDAS2

CABOLO® One with the Max Secure add-on ensures the authenticity and integrity of produced documents in compliance with European eIDAS/eIDAS2 regulations.

The Max Secure configuration includes:

- A USB dongle to enable device access and store encrypted documents instead of on the internal hard drive.
- A secondary service USB drive.

Compatible with password-protected and tamper-proof certified USB dongles, such as DataShur, this configuration enhances security.

ZIP files saved on the USB dongle are encrypted, and the following digital technologies are applied to the documents:

- Hash: Each document is assigned an encrypted fingerprint (HASH) using a 4096-bit asymmetric key.
- Watermark: Produced audio and video files are embedded with a watermark identifying the author and timestamp of each frame.
- Qualified Electronic Seal: A qualified electronic seal can be applied, granting the documents legal validity.

This robust security framework makes CABOLO® One with Max Secure an ideal solution for industries requiring the highest level of document protection and legal compliance.

EXAMPLE USE CASES

CONFIDENTIAL MEETINGS MINUTED IN REAL-TIME

CABOLO® One is the ideal solution for customers requiring real-time recording of meetings and BoDs. This efficient, secure, and fully digital system is designed to meet the highest standards of confidentiality and productivity. It ensures that every meeting is accurately recorded, transcribed, archived, and indexed, delivering a comprehensive and reliable record.

TRANSCRIBE ALL MEETINGS SECURELY AND EFFICIENTLY

Taking notes during meetings, whether in-person, hybrid, or remote, can be time-consuming. Simply recording the meeting is insufficient, as the data must then be transcribed or even translated, often requiring costly external services. Sharing sensitive content with third parties poses a significant risk to corporate privacy and security. CABOLO® One provides a reliable, portable, multilingual, and completely offline solution, ensuring efficiency and safeguarding confidentiality.

40 YEARS OF INNOVATION IN THE SPEECH INTELLIGENCE MARKET

We provide offline and secure AI-powered solutions to public and private sector clients, delivering tangible and effective digital transformation. Our cutting-edge speech recognition technology adds value to both words and time.
